"The Government of Canada today announced a CAD 13.6 million (EUR 8.6 million, MiM) investment in the National Research Council (NRC)'s Vancouver-based fuel cell and hydrogen industry."

The article at *Marketwire* continues: "[Furthermore, the Minister for Natural Resources] officially opened the Hydrogen and Fuel Cell Gateway - a technology demonstration and exhibit centre showcasing Canada's world-leading fuel cell and hydrogen industry."

It seems the Canadians are serious in trying to establish Vancouver as one of the world's hydrogen hotspots: "In addition to the Hydrogen and Fuel Cell Gateway demonstration centre (...), a world-class NRC research facility that works with all of Canada's major fuel cell developers and users has been created; construction has begun on the only publicly available hydrogen-rated environmental test chamber in North America."
